

M & R Machines (2000) Ltd.

Your affordable choice for quality Canadian-made products

CROSS AUGER KITS

Our top quality, fully-extended cross auger kits will create faster cutting times in light-weight crops such as peas and canola. Kits include everything you need to install and operate; including augers, hoses, motor, flow control, brackets and hardware.

**Contact us for lowest prices and best customer service on these kits!*

→ Are the ends of your original MacDon cross augers worn out? No need to replace - we have repair kits as your solution!

CONTINUOUS-FEED HEADER AUGERS

Custom made for most makes and models and priced right! Fingers are inserted across the entire length of the auger to provide a very consistent, faster-feeding and smoother flow of crop. Pulse, tangled & lodged crops are no problem to feed through. Cleaner cutting as the crop is moved away from the cutting bar. Heavier and longer centers are used to resist cracking. Standard augers are also available.

Auger Repair: Premium re-built augers are completely inspected, straightened, professionally painted, and are ready to exchange.

JD Header Repair: Worn out header pans, skid plates (JD & CIH), and floor tins can be replaced, as well as straightening of the cutter bar, frame brackets, etc.

HAYBINE CONDITIONING ROLLS

- Designed for a more-aggressive or less-aggressive crimp.
- Much longer wear than rubber rollers.
- Built to OEM specs for most makes & models or custom designed models.
- Complete haybine rebuilding including augers, tins, booms.
