For over 25 years, we have held quality, professionalism, reliability and service at the forefront of our efforts. With many industry patents to our credit and over 11,000 door systems installed, we continue to lead the industry in the technology and development of the best door and hydraulic systems for enclosures of virtually any size. Continuously developing and building these products since 1992 is a claim that only PowerLift can make.

Our highly trained family of fabrication and support centers are strategically located across the continent and have extensive experience with enclosures of over 100'.

Contact us today to learn more about what we can do to help you begin your next project, or bring new life and functionality to your existing structure.

The core of each PowerLift hinge is a 1" diameter 100,000 psi rated stress proof shaft running within our patented greaseless bushing. Our hinge bushings consist of a high-grade steel and porous bronze matrix which is impregnated with a synthetic fluoropolymer (PTFE). PTFE has one of the lowest friction coefficients of any solid material without using any form of lubricant.

Hinge blades have a solid pass-through attachment with multiple weld points for maximum reinforcement.

All welded, solid steel hinge and door assembly.
