

MAXIMIZE CONTACT CLEAR SNOW

HLA's EdgeFlex takes a ground up approach to clearing snow. The segmented cutting edge provides the necessary adaptability to maintain consistent contact over uneven surfaces, common with aging infrastructure.

With maximum contact the mouldboard transfers its weight evenly across the cutting edge. The even distribution of force protects the surface from the potential damage of conventional blades when they scrape over high spots.

Plowing with an EdgeFlex is easy; just lay the blade down and run. While you worry about blade placement and controlling the direction of the flowing snow, HLA's EdgeFlex technology works its way across the surface, adapting to the contours for cleaner results.
