

STUD & POST FRAME BUILDINGS

- machine storage • hay shelters • heated shops
- commercial warehousing • riding arenas • cattle shelters

Thorough Workmanship

Quality

Built Strong to Last

How are ICL Buildings different?

- buildings are designed & approved by engineers
- we use #2 or better grade lumber
- commercial spec trusses
- support for each individual truss
- concrete is used under posts for firm base
- start, middle & end sections of trusses are lined with plywood for rigid support

Buildings are designed and constructed for longevity in the Saskatchewan winters!
